**Subject:** LDW Passive Deposition (Rain) Sampling - Round 11 Sampler Retrieval - Round 12 Sampler Placement - Tuesday 08/01/06

LDW Rain Sampling Team;

Ecology's relocated Beacon Hill Station is still off-line, at least until September or October. For this round, we will have the same samples as last time. Five (5) samplers will be prepared: One (1) original sample for each of the four (4) remaining stations and one (1) duplicate sample at Station SPCC. Here are the proposed sample IDs:

- CER-01-080106-####06
- DZ-01-080106-####06
- KCIA-01-080106-####06
- SPCC-01-080106-####06 (Original)
- SPCC-02-080106-####06 (Duplicate)

**Dana & Tammy:** You are scheduled to meet Antony Leo (Ecology) at the Georgetown Station at 0830 on 08/01/06. Because the weather has been so dry, we will probably have more particulate in the funnels. Please take care when handling the funnels.

**Jack:** After the samplers are prepared, use the sampler for Station CER to collect a rinse blank sample and a funnel wipe blank sample. When the samplers return from the field, all will be analyzed for the aqueous fraction as well as wipe samples being conducted on the funnels.

Please let me know if there are any questions.

Thanks,

Bruce
